1. Overview

Stafforyx HR is a complete human-resources and payroll management system built by SYNTRIX PH. It centralises everything an organisation needs to manage its workforce — employee records, attendance, leaves, holidays, overtime, payroll, payslips, documents, announcements and reporting — inside one secure, easy-to-use application.

The system is designed for the Philippine setting: payroll follows local pay practices (daily and monthly pay bases, regular and special holidays, night/rest-day handling, and the standard SSS, PhilHealth, Pag-IBIG and withholding-tax deductions), while the interface stays simple enough for any HR officer to use without training.

Who uses Stafforyx

- **Administrators / HR officers** — manage employees, attendance, payroll, and company settings.
- **Managers** — review and approve leaves and overtime for their people.
- **Payroll officers** — generate payroll, produce and send payslips.
- **Employees** — use the self-service **Employee Portal** to clock in/out, file leaves and overtime, and view their payslips.

Key capabilities at a glance

- **Multi-company** — one installation can manage several companies, each with its own employees, settings and payslip branding.
- **Role-based access** — every user only sees the modules and companies they are permitted to.
- **Attendance** — manual entry, WiFi/IP self-service portal, and biometric-device ready.
- **Flexible scheduling** — fixed work schedules or per-day shift assignments, plus flexible-hours employees.
- **Smart payroll** — computes pay from real attendance, leaves and holidays; supports daily and monthly pay bases.
- **Branded payslips** — per-company accent colour, logo, footer note and an auto-filled "Prepared By" signature.
- **Reports & exports** — employee, attendance and payroll reports with data export.
- **Installable app (PWA)** — can be installed on desktop and mobile for quick access.

How the system is organised

Stafforyx is divided into modules, reached from the left-hand sidebar. The table below maps each sidebar item to what it does — the rest of this manual walks through each one in detail.

Sidebar	Module	What it is for
Dashboard	Dashboard	At-a-glance summary of the organisation today.
Employees	Employees	The master list of staff and their records.
Companies	Companies	Company records and payslip configuration.

Sidebar	Module	What it is for
Attendance	Attendance & Schedules	Daily attendance and work-schedule setup.
Leave Management	Leaves	Leave requests, approvals and balances.
Payroll	Payroll	Periods, payroll generation and payslips.
Holidays	Holidays	Holiday calendar and pay rules.
Documents	Documents	Employee document storage.
Announcements	Announcements	Company-wide and targeted notices.
Reports	Reports	Reports and data exports.
(Profile menu)	Users / Theme / License	Access control, appearance and licensing.
Employee Portal	Portal	Employee self-service area.

2. Core concepts

Companies (multi-company)

Everything in Stafforyx belongs to a **company**. Employees, attendance, payroll and settings are all company-scoped, so data from one company never mixes with another. Administrators with access to more than one company can switch between them where relevant (for example, the Payslip Settings page has a company picker in the top-right).

Roles & permissions

Access is controlled by each user's **role** and the individual **module permissions** on their profile. A user only ever sees what they are allowed to:

Role	Typical use	Sees
Super Admin	System owner / SYNTRIX PH	Everything, all companies.
HR Admin	HR officer	The modules enabled on their profile, for their companies.
Manager	Team lead	Approvals and the modules they are granted.
Employee	Staff member	Only the Employee Portal (self-service).

Important: A user must have a **role other than Employee**, be **Active in Stafforyx**, have the specific module permission switched on (e.g. *Can manage payroll*), and be **assigned to at least one company** before they can open and use a management module.

Licensing

Stafforyx runs against a license. When a license is active the app is fully editable. If a license is expired/inactive — or the computer clock is rolled back — the app switches to a read-only state and shows a banner; you can still view data, but saving changes is blocked until the license is restored from the **License Status** page.

3. Getting started

Signing in

Open the application URL in your browser and sign in with the username and password provided by your administrator.

Figure 3.1 — The Stafforyx sign-in screen.

Tip: Stafforyx is a Progressive Web App. In Chrome/Edge you can install it (the install icon in the address bar) to launch it like a desktop or mobile app.

Finding your way around

After signing in you land on the **Dashboard**. The fixed **sidebar** on the left groups the modules (Main, People, Workforce, Finance, Admin/Management). The **top bar** shows the current page and your profile menu. Your profile menu (top-right) is where you reach the Employee Portal, Users, Theme, License Status and Payslip Settings, and where you log out.

Personalising the sidebar (Theme)

From your profile menu choose **Theme** to recolour the sidebar to your liking — pick a preset or any custom colour, with a live preview. The choice is saved to your account, so it follows you on every device and does not affect other users.

Figure 3.2 — Theme: personalise your sidebar colour.

4. Modules

4.1 Dashboard

The Dashboard gives an at-a-glance picture of your organisation today: active employees, who is present, pending leaves, and current-period payroll, plus quick-action shortcuts and recent activity (employees, attendance, leave requests and announcements).

Figure 4.1 — The main Dashboard.

4.2 Employees

The Employees module is the master list of your staff. From here you can search, filter by status or department, and open any employee to view or edit their full record.

Adding or editing an employee

- 1 Click **Add New Employee** (or the edit icon on an existing row).
- 2 Fill in personal details, company, employee ID, department and position.
- 3 Set **Pay Basis** (Daily or Monthly), the **Basic Salary**, and — for daily-paid staff — the **Daily Rate**.
- 4 Optionally assign a **Work Schedule**, biometric ID, government numbers and fixed contribution amounts.
- 5 Save. The employee now appears in the list and is available to attendance and payroll.

Tip: Monthly employees are paid from **Basic Salary**; daily employees are paid from **Daily Rate**. If a daily employee's rate is left blank, the system computes it from $\text{Basic Salary} \div 26$.

4.3 Attendance & Schedules

Attendance records the days your employees work. Records can be entered manually, captured through the WiFi/IP **Employee Portal** time clock, or imported from biometric devices. Each record carries a date, time-in/out, computed late/undertime/overtime minutes and a status (Present, Late, Half Day, On Leave or Absent).

May 15, 2026	April Jay Loretero Tan STF-0001 • Admin	Poxel	8:00 AM	5:00 PM	540 min	—	—	—	Present	

Figure 4.4 — Attendance list.

Work schedules

A **Work Schedule** defines an employee's normal working days and hours (start/end time, grace period, required hours and which weekdays are working days). For day-to-day changes you can also assign per-date **shift templates** or rest days. Schedules drive how attendance is classified and how payroll counts scheduled vs. absent days.

Work Schedules

Define work schedules used for attendance calculation.

← Back to Attendance Add Schedule

Schedules 3

Name	Start	End	Grace (min)	Break (min)	Req. Hours	Workdays	Employees	Status	Actions
DILI REGULAR	10:00 AM	7:00 PM	5	60	8.00	Mon Tue Wed Thu Fri Sat	1	Active	Edit Delete
REGULAR	8:00 AM	5:00 PM	15	60	8.00	Mon Tue Wed Thu Fri Sat	1	Active	Edit Delete
TEST	1:00 PM	2:00 PM	0	0	8.00	Mon Tue Wed Thu Fri	1	Active	Edit Delete

Figure 4.5 — Work schedules.

Tip: Payroll honours the attendance **status**, not just clock-in time. A day marked **Present** counts even without a recorded time-in; **Half Day** pays 0.5; **On Leave** is handled by the leave module; and explicit **Absent** is not paid. Employees without a work schedule are still paid from their actual attendance.

4.4 Leave Management

The Leaves module handles the full leave workflow: employees (or HR) file a request, a manager or HR reviews it, and approved leaves automatically flow into payroll. Paid leave is counted as payable days; unpaid leave is excluded but does not count as an absence.

Stafforyx

Leave Management

Review and manage employee leave requests.

Employee: All Employees | Leave Type: All Types | Status: All Statuses | Start Date: mm/dd/yyyy | End Date: mm/dd/yyyy

Leave Requests

Employee	Leave Type	Start	End	Days	Status	Reviewed	Actions
No leave requests found.							

[Add First Leave Request](#)

Figure 4.6 — Leave requests list.

Approving or rejecting

- 1 Open **Leave Management** and review the pending requests.
- 2 Open a request to see the dates, type (paid/unpaid) and reason.
- 3 Click **Approve** or **Reject**. Approved leaves are picked up the next time payroll is generated.

4.5 Holidays

The Holidays module is the company holiday calendar. Each holiday has a type (regular or special), a paid/unpaid flag, a no-work pay percentage and a worked-day multiplier. Payroll uses these rules automatically — for example, an employee who works a regular holiday is paid the holiday multiplier, while a no-work paid holiday still pays the configured percentage.

Figure 4.7 — Holiday calendar and pay rules.

4.6 Overtime

Overtime is governed per employee by an **overtime policy** (not allowed, automatic, request required, or management review). Where requests are required, employees file overtime from the portal and HR/managers approve it here. Only **approved/payable** overtime is paid by payroll.

Figure 4.8 — Overtime management.

4.7 Payroll

Payroll is where pay is calculated and payslips are produced. The workflow has three parts: define a **payroll period**, **generate** the payroll for that period, then review and issue **payslips**.

Generating payroll

- 1 Create a **Payroll Period** (name, start and end dates, optional pay date).
- 2 Open **Generate Payroll**, choose the period (and optionally a department).
- 3 Leave **Recalculate existing Draft records** ticked to refresh drafts with the latest attendance.
- 4 Generate. Stafforyx computes each employee's pay from attendance, leaves and holidays.
- 5 Review the resulting records; approved/paid records are never overwritten.

Generate Payroll

Payroll / Generate

Generate Payroll from Attendance

Bulk-create or recalculate draft payroll records using attendance and schedule data.

Generation Options

Payroll Period *

— Select a period —

All active employees in the period's company will be included.

Department (optional — leave blank for all)

All Departments

☒ **Recalculate existing Draft records**

When checked, any draft records for the selected period will be recalculated using the latest attendance data. Approved or Paid records are always left unchanged.

① Payroll Engine V2 — Attendance-based calculation

- Scheduled days** — resolved from employee's Shift Roster or default Work Schedule.
- Absent days** — scheduled days with no time-in AND no approved leave (missing records count as absent).
- Payable days** = present days + paid leave days.
- Basic pay** = $\text{basic_salary} + 26 \times \text{payable_days}$
- Overtime pay** = $\text{OT_minutes} \div 60 \times \text{hourly_rate} \times 1.25$
- Late / Undertime deductions** = $\text{minutes} \div 60 \times \text{hourly_rate}$
- Contributions** copied from each employee's fixed deduction settings.
- Records are created as **Draft** — review before approving.

Generate / Recalculate Cancel

Figure 4.9 — Generate Payroll.

The screenshot shows the Stafforyx HR interface. On the left is a dark sidebar with the Stafforyx logo and a navigation menu. The main content area is titled 'Payroll' and includes a sub-header 'Manage employee payroll records and pay status.' Below this are filter buttons for 'Payroll Periods', 'Generate Payroll', and 'Add Payroll Record'. A filter bar contains dropdowns for 'Payroll Period' (All Periods), 'Employee' (All Employees), 'Status' (All Statuses), and 'Company' (All Companies), followed by a search icon. Below the filters is a section titled 'Payroll Records' with a table of records. The table has columns for Employee, Period, Basic Pay, Gross Pay, Net Pay, Status, and Actions. One record is visible for 'April Jay Loretero Tan' with a 'Test Pay' period and a 'Draft' status. The bottom of the sidebar shows the copyright 'Stafforyx HR © 2026 by SYNTRIX PH'.

Figure 4.11 — A generated payslip.

4.8 Payslip Settings (per company)

Each company controls how its payslips look and read. Reach this from the profile menu (**Payslip Settings**) or via Payroll. Here you set the display name and address, accent colour, which sections appear, a footer note, and the **Prepared By** block — a preparer name, title and a signature you can either **upload** or **draw** on screen. The signature and name then appear automatically on every payslip for that company. Use the company picker (top-right) to configure a different company.

5. Payroll computation reference

This section explains, in plain terms, how Stafforyx turns attendance into pay. You do not need to memorise it — the system does the maths — but it helps when reviewing figures.

Rates

- **Daily rate** — a daily-paid employee uses their **Daily Rate**; otherwise it is $\text{Basic Salary} \div 26$.
- **Hourly rate** — $\text{daily rate} \div 8$.

Days and pay

- **Scheduled days** — the days an employee is expected to work in the period.
- **Present days** — days the employee actually worked (by attendance status); Half Day counts as 0.5.
- **Paid leave** — approved paid-leave days on scheduled working days; counted as payable.
- **Absent days** — scheduled days with no presence and no leave (informational; already excluded from basic pay).
- **Payable days** — $\text{present days} + \text{paid-leave days}$. **Basic pay** = $\text{daily rate} \times \text{payable days}$.

Additions and deductions

- **Overtime pay** — $\text{approved overtime minutes} \div 60 \times \text{hourly rate} \times 1.25$.
- **Holiday pay** — worked holidays pay the holiday multiplier; no-work paid holidays pay the configured percentage.
- **Late / undertime** — deducted as $(\text{minutes} \div 60) \times \text{hourly rate}$.
- **Statutory** — fixed SSS, PhilHealth, Pag-IBIG and withholding tax from the employee record.
- **Adjustments** — one-off earnings (e.g. bonus, allowance) or deductions (e.g. cash advance) added per record.

Tip: Net pay = Gross pay – Total deductions. Absent days are already removed from basic pay, so they are shown for information only and are never deducted a second time.

6. Tips & troubleshooting

Payroll shows zero or looks wrong

- Make sure the employee has **attendance** in the period and a **Basic Salary/Daily Rate**.
- Regenerate the period with **Recalculate existing Draft records** ticked, or delete the draft and regenerate.
- Check the **payroll period dates** actually cover the attendance dates.

A new administrator cannot open a module

- Confirm their **role is not Employee** and they are **Active in Stafforyx**.
- Switch on the specific permission (e.g. *Can manage payroll*).
- Assign them to **at least one company** — without a company they will see no data.

The app is read-only / shows a license banner

- Check the computer date/time is correct (a rolled-back clock triggers read-only).
- Open **License Status** and renew/activate the license.

A payslip looks off

- Set the **Prepared By** name, title and signature in **Payslip Settings** for that company.
- For a clean signature, upload a **transparent PNG** or use the on-screen **Draw** option.
- Adjust the accent colour and visible sections in Payslip Settings.

Appendix A. Permission reference

Each user profile exposes the following module permissions. Grant only what the person needs.

Permission	Grants access to
Can access dashboard	The main Dashboard.
Can manage employees	Employee records.
Can manage attendance	Attendance & schedules.
Can manage leaves	Leave requests and approvals.
Can manage payroll	Payroll periods, generation and payslips.
Can manage documents	Employee documents.
Can manage announcements	Posting announcements.
Can view reports	Reports and exports.
Can manage users	User & access management.
Can manage settings	Company / payslip settings.
Can manage license	License activation.

This manual was generated for Stafforyx HR by SYNTRIX PH. Screens shown use sample data; your figures and branding will differ.
